## Update orbeon used in xforms-manager

We use a jar-reduced modified orbeon. To update to a new version, I would suggest doing the following:

- Download a new war version of orbeon from <http://www.orbeon.com/>
- Replace/update all the jars we are using for orbeon. This is described in the [dependencies.rb](#) file.
- Check the [web.xml](#) file for xforms-manager is still compatible. (And probably same for the geronimo-web.xml)
- Check the [page-flow.xml](#) file is still compatible
- Replace the following folders with the new ones: [config](#), [context](#), [images](#)
- We had a slightly modified [properties.xml](#) to avoid some persistence features we don't use.
- We had a [services.xml](#) in that same properties folder, so need to keep it
- Also, restore the intalio [CSS](#) file
- The folder [formManager](#) is left untouched
