Where is the IFrame code of the xFormsManager

On the standalone version, the frame code of the xFormsManager is actually in a jsp UI-FW, [tasks.jsp](#), which is wrapping everything. Note that the header of UI-FW, [siteheader.jsp](#) is also responsible for the layout of the whole page.

In the portlet version, the form pops up in a ExtJS frame. The javascript can be found in [entry.js](#) and the code calling it is defined in the ExtJS table, found in [ui-fw-portlet.jsp](#)
