Access forms directly

There is a way to call the forms directly, by creating a URL based on the following set of rules:

- The base url of the server

| <http://localhost:8080>

- The handler for the form

| /xFormsManager/init or
| /xFormsManager/act or
| /xFormsManager/notification

- Then a few parameters:

- The id of the task the form is attached to:

| id=cc29fd05-9494-4f90-b8dc-eb24c13a0bdb

- The Type of the task:

| type=PIPATask or
| type=Notification or
| type=PATask

- The URL of the form, as it has been deployed

| url=/AbsenceRequestAbsenceRequest.xform

- A participant token

| token=...

This gives something like:

| [Sample URL\(Right Click me\)](#)
