Customization of the UI-FW

Modifying the intro page.

You can edit and modify at will the welcome page by editing the following page:
<http://tempo.intalio.org/tempo/trunk/ui-fw/src/main/webapp/customize/intro.jsp>
Or in the server, within the ui-fw application folder:

```
webapp/customize/intro.jsp
```

Welcome to TEMPO

Start your session by clicking on the tab you want to start working with.
You can find more information on the [tempo website](#).
And of course, find your best samples and tutorials at the [Intalio Library](#).

Internationalization of the UI-FW

Modifying the default language settings

To Modify the default language (in this example, we are going to set the language as japanese):

- Open the file SERVER_PATH\var\config\tempo-ui-fw.xml.
- Add the following bean in the "beans" tag :

```
<bean id="localeResolver" class="org.springframework.web.servlet.i18n.FixedLocaleResolver">  
<property name="defaultLocale" value="ja" />  
</bean>
```

- Restart your server.

If you want to set the language according to the language of the user (the language settings of the browser) :

- Open the file SERVER_PATH\var\config\tempo-ui-fw.xml.
- Add the following bean in the "beans" tag :

```
<bean id="localeResolver"  
class="org.springframework.web.servlet.i18n.AcceptHeaderLocaleResolver">  
</bean>
```

- Restart your server.

Adding another language

The Intalio UI-FW currently supports an english and japanese versions. To add another language :

1. Go to SERVER_PATH\repository\org\intalio\tempo\ui-fw\5.2.0.19\ui-fw-5.2.0.19.war\WEB-INF\classes (the path will slightly change depending on your server version).
2. copy and paste messages_en.properties and rename it. (messages_fr.properties for french, messages_sp.properties for spanish...).
3. Translate the values of the properties in the file.
4. Modify the default language settings (see above).
5. restart your server.
