Atom Feeds

You can access atom feeds from the UI-FW, either using the alternate feed icon, in the main bar, or using the provided feeds button.

So far, the feeds URLs are something similar to:

- **Tasks and Notifications**: http://localhost:8080/feeds/atom/tasks?token= ...
- **People Initiated People Activity**: http://localhost:8080/feeds/atom/processes?token= ...

We are using Atom Version 1.0 by default.
The feed content will look something like:

```
<?xml version='1.0' encoding='UTF-8'?>
<feed xmlns="http://www.w3.org/2005/Atom">
 <id>IntalioFEEDID</id>
 <title type="text">Intalio Processes</title>
 <link href="" /><link href="" rel="self" />
 <author><name>intalio</name></author>
 <updated>2008-06-23T05:27:18.937Z</updated>
 <subtitle type="text">This is a feed for the following user:intalio\admin</subtitle>
 <category term="processes" />
 <entry>
   <id>072e3db1-cbc7-4e3b-9a5f-e095a0425670</id>
   <title type="text">Examples - Absence Request</title>
   <updated>2008-06-23T05:27:19.727Z</updated>
   <link
           href="http://localhost:8080/xFormsManager/init ..."
           title="Link to Examples - Absence Request">Link to Examples - Absence Request</link>
 </entry>
</feed>
```

We are using Apache Abdera under the hood, which has great support for server feeds and caching.

The file **tempo-ui-fw.xml** controls the configuration of the feeds.

```
    <bean id="configuration" class="org.intalio.tempo.uiframework.Configuration" factory-method="getInstance">
    ...
        <property name="feedItemBaseUrl" value="http://127.0.0.1:8080"/>
        <property name="feedUrl" value="http://tempo.intalio.org"/>
    ...
    </bean>
```

To use the feeds properly you need to change the feedItemBaseUrl to match that of your base server, or any other proxy is standing in front.

A short video explains how the feeds can be used.
