Migrate data from Tempo 5.1

1. Deploy the webapp called tempo-dao into your application server
2. Copy the tempo-migrate.properties file into the usual intalio config directory of the server
3. Edit the values accordingly to version 5.1 (using jdbc) and version 5.2 (using jpa)
4. Check the jdbc driver can be accessed, or add it so that it is accessible from the webapp
5. Access the following url: http://localhost:8080/tempo-dao/migrate and check no error is reported
6. Click the "Start Migration" button
7. Items and tasks that cannot be migrated will be reported in red.
